

# OMAR SEMGEY

## FRONT-END WEB DEVELOPER

---

**PHONE :** +963-934-769-422

**EMAIL :** omar.semgey@gmail.com

---

### SUMMARY

---

Front-end developer with 4 years' experience shipping production web products to thousands of users. Skilled in React, Redux, Firebase, and TypeScript, with a proven ability to balance speed and quality in high-growth environments. Customer-obsessed and impact-driven, with a track record of collaborating with designers and PMs to shape product roadmaps and deliver features that improve user experience at scale.

### PROJECTS

---

#### Lamatics – E-Testing Platform (2025)

- Shipped a bilingual math testing platform serving 500+ concurrent students per session, stress-tested for reliability under scale.
- Collaborated with educators and product stakeholders to design role-specific dashboards, improving accessibility and engagement.
- Iterated rapidly on UI/UX features, balancing speed with long-term maintainability and security best practices.
- Influenced roadmap discussions by providing trade-offs between delivery speed and scalability.
- Improved student engagement through simplified UI.

#### Multi-Vendor E-Commerce Platform (2024)

- Built a production-ready online marketplace with React + Laravel, supporting multi-vendor catalogs and high-volume transactions.
- Optimized storefront performance through caching and query tuning, achieving 40% faster load times.
- Partnered with designers and PMs to deliver intuitive shopping flows and scalable admin tools on tight deadlines.
- Balanced rapid delivery of new features with architectural decisions for long-term growth and maintainability.
- Boosted vendor sales by streamlining purchase flow.

### SKILLS

---

- Strong expertise in Vanilla JS, ReactJS, Redux, Firebase.
- Rapid iteration & shipping: delivering features quickly while maintaining code quality.
- Collaboration: partnering with cross-functional teams to influence roadmaps.
- Building scalable front-end architectures with React + TypeScript.
- UI/UX performance optimization (lazy loading, caching, responsive design).
- Customer empathy: simplifying complex flows to reduce friction and improve accessibility.

### TECH STACK

---

- Front-End: React, Redux, Next.js, TailwindCSS, Vanilla JS, HTML, CSS, TypeScript.
- Databases: Firebase (primary), SQLite | Familiar: Supabase, MySQL
- Tools: Git/Github, CI/CD workflows, automated testing practices
