SUMMARY

Full-stack web developer with hands-on experience building and deploying web applications using React, Next.js, TypeScript, Laravel, and PostgreSQL. Experienced in designing modular architectures, REST APIs, relational database schemas, and admin systems, with a focus on maintainability and scalability. Comfortable taking projects from requirements and architecture through implementation and deployment.

PROJECTS

Al Mohandes – Engineering Tools Platform | Freelance Project(2026)

[Live](#)

A production engineering platform developed for construction engineers, bringing specialized calculators, unit conversion, engineering references, and other technical tools into a single web application.

Tech Stack: Next.js, React, TypeScript, TailwindCSS, Laravel, PostgreSQL

- Built a bilingual engineering platform for engineers, combining steel calculators, unit conversion tools, engineering-code references, and other utilities into a unified web application.
- Implemented an administrative interface for managing calculators, sections, inputs, units, calculation results, and configurable options.
- Designed relational database structures for engineering calculations and reusable units, supporting extensibility as new tools are added.

Lamatics – E-Testing Platform (2024)

[Github Repo](#) | [Live](#)

Full-stack e-quiz platform connecting teachers and students with automated grading, progress tracking, and responsive dashboards.

Tech Stack: React, Axios, Laravel (REST API), PostgreSQL, Redis

- Built role-specific dashboards with responsive UI, enabling teachers and students to interact seamlessly on desktop and mobile
- Optimized backend with Redis caching and scalable RESTful APIs, ensuring secure access and maintainable database design
- Designed and implemented automated grading, progress tracking, and modular components to simplify quiz management and support future expansion

SKILLS

- Full-stack expertise: React, Node.js, Laravel — strong command of scalable, maintainable architectures.
- Architectural decision-making: modular systems, optimized databases, performance benchmarks.
- Scalability focus: caching, query optimization, role-based access control.
- Deployment & CI/CD: experience with Git workflows, automated deployment pipelines, and environment setup.

TECH STACK

- Front-End: React, Nextjs, TailwindCSS, TypeScript.
- Back-end: Laravel, Node.js.
- Databases: PostgreSQL, MySQL | Familiar: Firebase
- Tools: Git/Github, CI/CD workflows, automated testing practices
